Warnings

DANGER

IMPROPER CRANE USE, CARE OR OPERATION CAN CAUSE
PROPERTY DAMAGE, INJURY OR DEATH.

DO NOT OPERATE THIS MACHINE UNLESS YOU HAVE READ AND
UNDERSTOOD THE OPERATING AND RATED CAPACITY MANUAL

CAUTION

WRITTEN AUTHORISATION IS REQUIRED FROM THE
MANUFACTURER PRIOR TO THE USE OF ANY
ATTACHMENT NOT SPECIFIED IN THE MANUAL

Definitions

Articulation – The crane pivots in the middle to allow steering and slewing of a lifted load. Working areas for the purpose of rated capacities are 0°-10°, 11°-20°, and 21°-30°, 31°-44° of articulation, in either direction from straight ahead. Up to 44° articulation is possible in either direction - see the working area diagram.

Deration – External influences that result in a decrease to the rated capacity, e.g. crane side slope.

Freely suspended load – A load hanging free with no forces other than the connection to the hook.

Load Radius – Is the forward horizontal distance between the centre of the front wheels to the vertical centre of the winch rope with a load applied. ‘Radius’ on the rated capacity charts refers to the load radius in meters.

Load moment indicator (LMI) – An Operator’s visual and audible indicator for when the rated capacity is approached and reached.

Rated capacity (RC) – The total load including the load equipment freely suspended in ideal conditions that the crane can safely lift at a given boom length and load radius.

Side load – Any external, horizontal force applied to the boom or load.

Work areas – The work area given in the working range diagram is taken from the centre pivot. The LMI display indicates the current articulation angle and will automatically update the allowable load at the different articulation bands indicated on the load charts.

Crane side slope – Side tilt of the crane chassis relative to the true horizontal.

Pitch – The forward or rear tilt of the crane chassis relative to the true horizontal in the longitudinal axis.

Slope – The angle of the ground.

Operation

CRUSH HAZARD	
 DANGER	<p>There is a crush hazard between the front and rear sections of the crane when articulating. Never stand in the pivot area with the crane engine running. Always remove the key, tag and lock out isolator switches located at the right hand side before carrying out any tasks within the pivot area.</p>

General

1. This machine has been designed tested to standards AS1418.1, 1418.5 and EN13000:2010(MOD) for pick and carry operation on tyres.
2. The rated capacities given are for this crane as standard from factory and when all directions are strictly followed in this document. Any deviation from the intended use given in this document or modification of the crane from standard could result in the rated capacity being reduced.
3. This crane can be hazardous if operated or maintained in a manner outside of the parameters set out in the operating, service and parts manuals. If any of these manuals are missing contact your local authorised TIDD agent for replacements.

Set up

4. Reduced rated capacities for a task shall be dictated by the operator with allowance for adverse conditions such as but not limited to:
 - The supporting surface
 - Load pendulum actions
 - Jerking
 - Sudden stopping of the load
 - Weather
 - Dual lifting
 - Electrical wires
 - Hazardous surroundings
 - Experience of personnel
5. Rated capacities are based on perfect scenarios with flat, level and firm ground (max of 1% slope/0.6°). Lifting or travelling with a load on uneven or soft ground can be hazardous and reduces the rated capacity of the crane. Refer to 'Operation on side slopes' in this document.

Never attempt to drag the load.

6. Wind forces of up to 10 m/s or 36 km/h have been factored into the rated capacity. Any additional wind force should be taken into account and allowance given to the rated capacity.
7. The rated capacities given in the charts above the red line are based on the structural and hydraulic competence of the machine. Exceeding the rated capacity of the lift chart above red structural line will lead to damage of the crane. The capacities given below the red line take into account the cranes stability.
8. The rated capacities given include the mass of the hooks, slings, blocks and auxiliary lifting devices. The mass of these components must be subtracted from the capacity given on the chart to give the net load weight.
9. Loaded boom angles at specified lengths are an approximation only of the radius - The boom angle should be increased to allow for deflection increasing the load radius as the load is lifted.

10. Read and understand all warnings and instructional notes.
11. Do not tip the machine to determine allowable lifting capacities.
12. Loads can be lifted from;
 - Main boom head - main hook
 - Rhino hook
 - 28t fixed lug on base boom
 - 25t moving lug on tele boom 1
 - Fly jib - main hook

A man basket may also be attached to the head of the boom. Always use the correct rated capacity chart for the lifting point being used and ensure the LMI is set to the correct duty. Any attachment not specified in the manual needs to be authorised in writing by TIDD prior to use.

13. Lifting from more than one point simultaneously is prohibited.
14. Personnel should never be handled via the boom except in an approved TIDD man basket. The basket should be fitted according to TIDD attachment specifications unless authorised to do otherwise.
15. When the boom length or radius are between given values use the lower rated capacity.
16. Side loading the machine can result in structural failure or tip over. Side loads can be generated by;
 - Lifting when not level
 - Sudden acceleration or deceleration when articulating a load
 - Dragging or pushing a load
 - Wind forces on the load and boom structure.

17. It is safe and acceptable to attempt to telescope any load within the limits of the rated capacity manual. The maximum load that may be telescoped is limited by;
 - Loaded boom angle
 - Hydraulic pressure
 - Lubrication of the boom sections
 - Boom length
18. Do not allow the winch to fully unwind, always ensure a minimum of 3 coils of rope remain on the winch drum. The winch is fitted with a 3rd wrap indicator.

19. Rated capacity is dictated by tyre condition, rating and pressure. All the tyres must be in good condition, inflated to the correct pressure and of the correct rating before attempting a lift.
20. Pick and carry is available through to full articulation, the rating decreases when moving through the articulation bands.
21. The maximum speed for pick and carry operation is 2.0 km/h
22. Using this crane outside of the rated capacity or given instructions is hazardous.

Operations on Side Slopes

Mobile cranes are designed to be used primarily on firm, flat and level ground (within 1% gradient) according to AS 1418.5 and EN13000:2010 (MOD). Any deviation from this requires an adjustment to the rated capacity. The following precautions should be adhered to when negotiating side slopes up to maximum allowed by the LMI.

Surface depressions and potholes will create the same effect as a side slope.

- Ensure the tyres are inflated to 130 psi.
- Ensure the ground condition is hard enough to support the axle loads.
- The crane LMI will automatically derate the rated capacity. Based on crane side slope, pitch and articulation.
- While lifting a load the crane side slope and pitch will change due to tyre and boom deflection.
- As articulation is increased this will also add to the induced crane side slope.
- Use the minimum boom length and boom angle to keep the boom tip as close as possible to the ground.
- Keep the load as close as possible to the ground.
- Use the minimum articulation as possible
- If possible keep the load uphill of the crane especially when articulated. The working radius will increase with a suspended downhill positioned load.
- Load swing will give greater instability, where possible tag line loads to prevent the pendulum type action of the load. Movements of the crane should be as smooth as possible.
- Planning a lift is important to keep within the rated capacity as the loading variables change as described above.

TYRE SPECIFICATIONS		
USE	SPEED	LOAD RATING
PICK & CARRY	0-2 Km/h	9250 KG
STATIC	0 KM/H	10500 KG
HIGHWAY	80 Km/h	3650KG

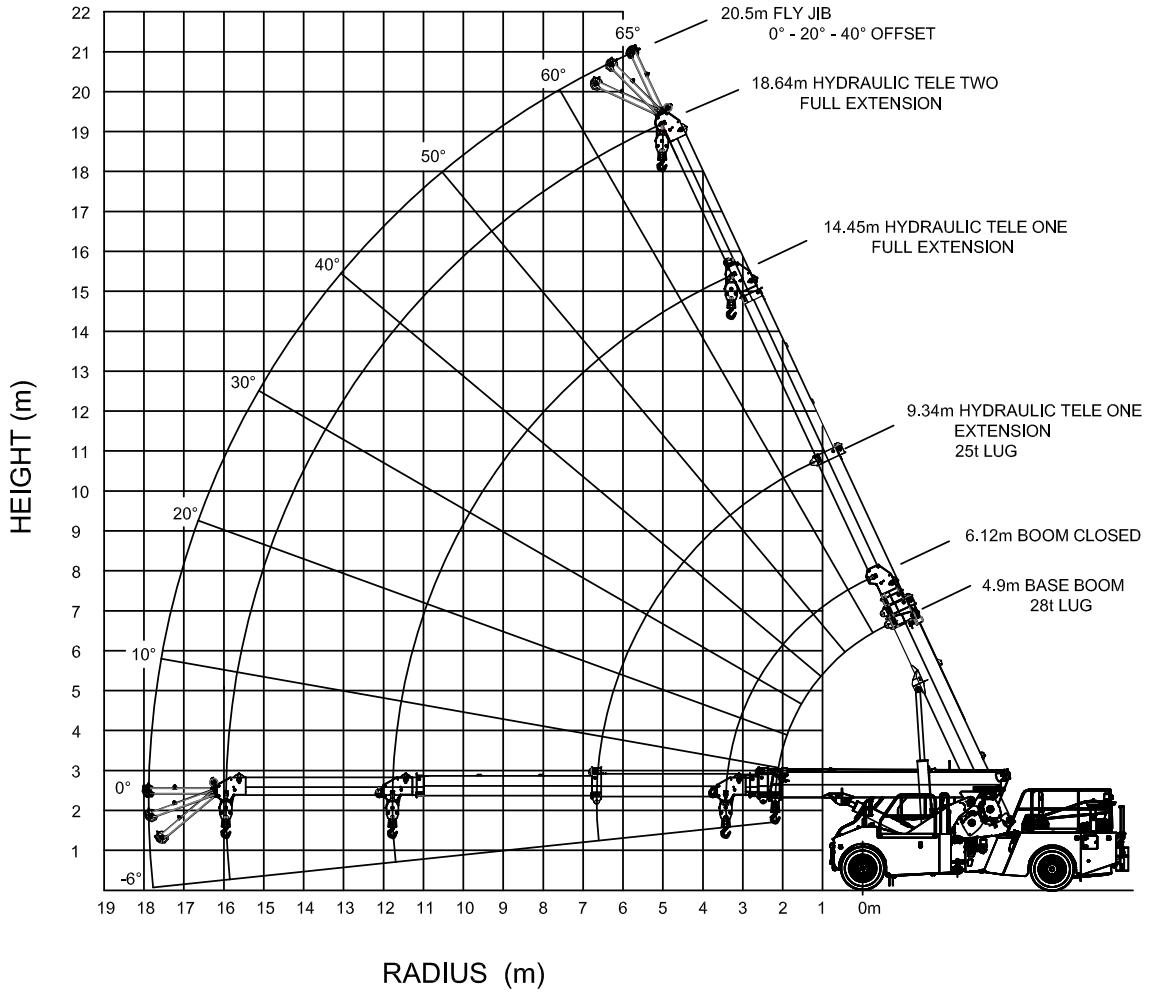

TYRE SPECIFICATION AND INFLATION CHART			
POSITION	SIZE	INFLATION PRESSURE (PSI)	
		PICK & CARRY	HIGHWAY TRAVEL
FRONT	12.00 X R20	130	130*
REAR	12.00 X R20	130	130*

* Reduce tyre pressures accordingly when not driving on fully formed roads as this will generate excessive heat and pressure.

• THIS CHART IS FOR CRANE SIDE SLOPE FROM 0° TO 0.6°. CRANE SIDE SLOPE LARGER THAN 0.6° THE LMI WILL DRAFE AUTOMATICALLY
 • STABILITY AS PER EN1300-2010 (MOD) AND AS1418.5.2013 PART 4.1.2.6.1 STATIONARY 75% OF TIPPING LOAD WITH HOLD BRAKE APPLIED
 • OPERATION OF THIS MACHINE WITH HEAVIER LOADS THAN THE CAPACITIES LISTED IS STRICTLY PROHIBITED. MACHINE TIPPING WITH BOOM EXTENSION OCCURS RAPIDLY AND WITHOUT ADVANCE WARNING
 • LIFTING IS TO VERTICAL ONLY
 • MASS OF SLINGS AND HOOK BLOCK TO BE ADDED TO LOAD
 • DURING OPERATION, WIND SPEED MUST NOT EXCEED 36 KM/H (10 M/S)
 • READ AND UNDERSTAND CRANE USER MANUALS BEFORE OPERATING
 • BOOM ANGLE IS WITH RESPECT TO THE HORIZONTAL
 • SPARE WHEEL NOT INCLUDED AS COUNTERWEIGHT
 • LOADS ABOVE THE BOLD RED LINE ARE LIMITED STRUCTURALLY
 • LOADS BELOW THE BOLD RED LINE ARE LIMITED BY STABILITY

• READ AND UNDERSTAND CRANE USER MANUALS BEFORE OPERATING
 • BOOM ANGLE IS WITH RESPECT TO THE HORIZONTAL
 • SPARE WHEEL NOT INCLUDED AS COUNTERWEIGHT
 • LOADS ABOVE THE BOLD RED LINE ARE LIMITED STRUCTURALLY
 • LOADS BELOW THE BOLD RED LINE ARE LIMITED BY STABILITY

• READ AND UNDERSTAND CRANE USER MANUALS BEFORE OPERATING
 • BOOM ANGLE IS WITH RESPECT TO THE HORIZONTAL
 • SPARE WHEEL NOT INCLUDED AS COUNTERWEIGHT
 • LOADS ABOVE THE BOLD RED LINE ARE LIMITED STRUCTURALLY
 • LOADS BELOW THE BOLD RED LINE ARE LIMITED BY STABILITY

• READ AND UNDERSTAND CRANE USER MANUALS BEFORE OPERATING
